

- **HT-29 cells**

Human HT-29 cells were isolated from the colon of a patient with colon adenocarcinoma.

- **Tumour growth *in vivo***

The cells were collected from a tissue culture flask and injected subcutaneously in the right flank of SCID-CB17 mice. The resulting tumours were monitored by measuring two diameters with calipers, and extrapolating the volume to a sphere.

The mice bearing HT-29 tumours can be treated by intra-peritoneal, intra-venous, intra-tumoral or subcutaneous injection of the compounds. Per os administration is also possible.

**Figure 1:** Tumour growth curve of the HT-29 cells as xenograft  
Mean  $\pm$  SEM (n=3; take rate 100%)

Antineo can also perform an intra-caecal implantation.
