

### ■ B16-F10 cells

Mouse B16-F10 cells were isolated from a spontaneous melanoma developing behind the ear of a C57BL/6 mouse.

### ■ Tumour growth *in vivo*

The cells were collected from a tissue culture flask and injected subcutaneously in the right flank of C57BL/6 mice. The resulting tumours were monitored by measuring two diameters with calipers, and extrapolating the volume to a sphere.

The mice bearing B16-F10 tumours can be treated by intra-peritoneal, intra-venous, intra-tumoral or subcutaneous injection of the compounds. Per os administration is also possible.
