

■ CT26 cells

Mouse CT26 cells were isolated from a NNMU induced undifferentiated colon carcinoma in a BALB/C mouse.

■ Tumour growth *in vivo*

The cells were collected from a tissue culture flask and injected subcutaneously in the right flank of BALB/C mice. The resulting tumours were monitored by measuring two diameters with calipers, and extrapolating the volume to a sphere.

The mice bearing CT26 tumours can be treated by intra-peritoneal, intra-venous, intra-tumoral or subcutaneous injection of the compounds. Per os administration is also possible.

Mean \pm SEM (n=6; take rate 100%)

Antineo can also perform an intra-caecal implantation.

■ Drug Responses

Anti-PD1 12.5 mg/kg \rightarrow No Response

Anti-PDL1 12.5 mg/kg \rightarrow No Response

Immunophenotyping data of the lymphoid and myeloid lineage are available upon request.
