

■ F0 cells

Mouse F0 cells were created by self fusing Sp2/0 myeloma cells using Sendai virus. They grow in a BALB/C background.

■ Tumour growth *in vivo*

The cells were collected from a tissue culture flask and injected subcutaneously in the right flank of BALB/C mice. The resulting tumours were monitored by measuring two diameters with calipers, and extrapolating the volume to a sphere.

The mice bearing CT26 tumours can be treated by intra-peritoneal, intra-venous, intra-tumoral or subcutaneous injection of the compounds. Per os administration is also possible.
