

- **MEL JUSO cells**

Human MEL JUSO cells were isolated from the primary tumor of a patient with melanoma.

- **Tumour growth *in vivo***

The cells were collected from a tissue culture flask and injected subcutaneously in the right flank of SCID/CB17 mice. The resulting tumours were monitored by measuring two diameters with calipers, and extrapolating the volume to a sphere.

The mice bearing MEL JUSO tumours can be treated by intra-peritoneal, intra-venous, intra-tumoral or subcutaneous injection of the compounds. Per os administration is also possible.
